Where are we at with carbon disclosure?

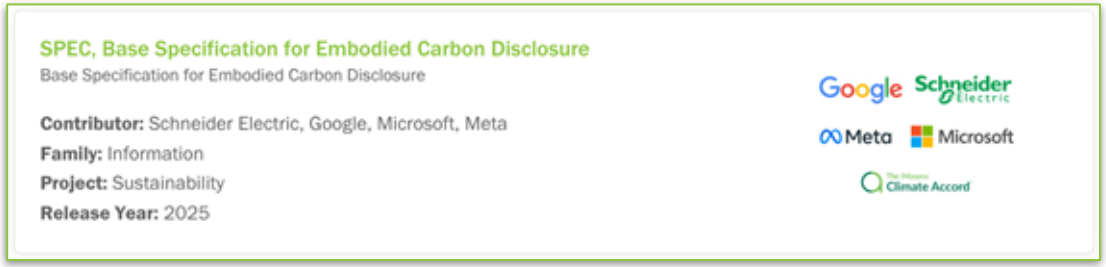

Public

Base Specification for Embodied Carbon Disclosure

Published August 2025 / Harmonize how embodied carbon emission data is requested across the data center supply chain

OCP Carbon Disclosure Specification

Defines minimum data field requirements for an embodied carbon disclosure

Respondent Identification
***Who** is providing the Carbon Disclosure*

Product Identification
***What** product is this carbon disclosure for*

Embodied Carbon Footprint
Core quantitative data point

Measurement Methodology
***How** the embodied carbon was calculated*

Future State: **Enable Low Carbon Procurement**

Low-carbon decision making/requirements by DC operators necessitates:

Availability of comparable, 3rd Party Validated Disclosures

Comparability is enabled by Product Category Rules (PCR)

Make Disclosures Publicly Available

Vendors are hesitant until disclosures are comparable

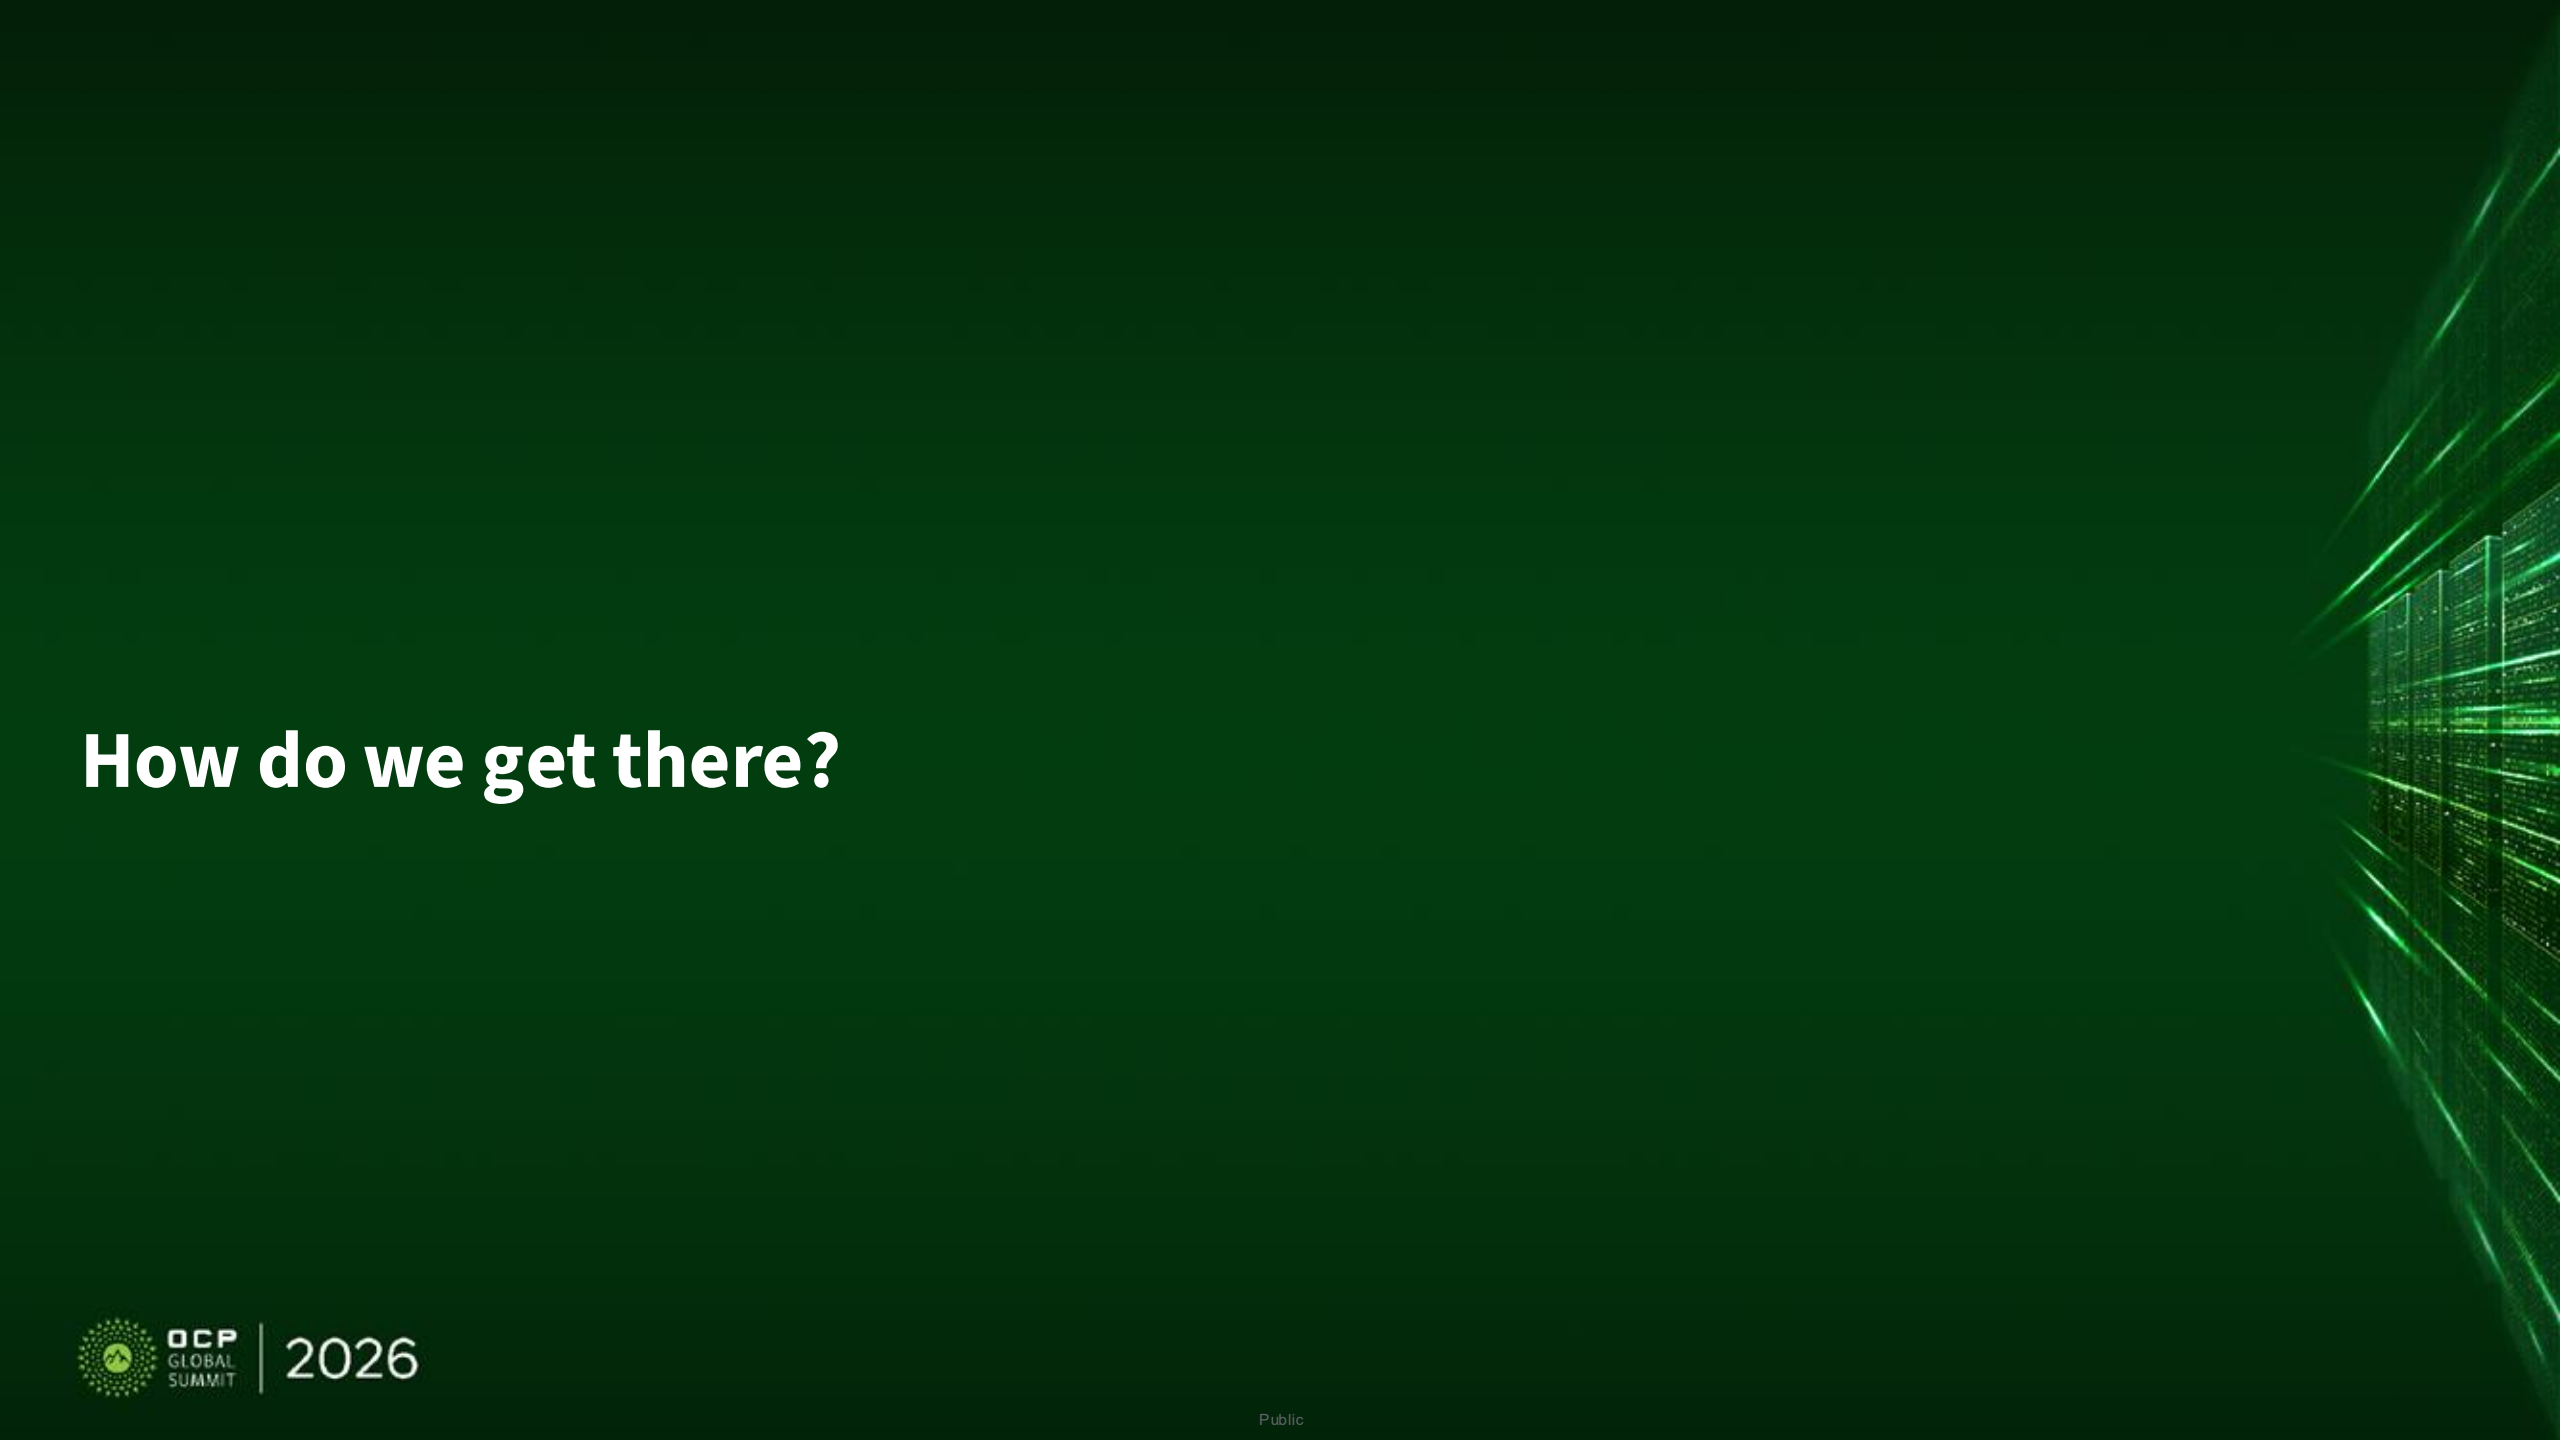

Material / Product Pathway for Decarbonization

Proven decarbonization pathways allow DC owners to set low carbon threshold specifications

Disclosure ≠ Decarbonization

But it is a critical first step

How do we get there?

Public

PCR Landscape: **Analysis and Prioritization**

Activities

- **Partner with OCP:** PCR Workstream driven by Microsoft/Meta/Google/AWS/Fraunhofer IZM, to leverage and contribute to the development of ICT Equipment PCR & Data Quality Scoring Methodology
- **Inventory existing PCRs and PCF guidelines** for ICT and MEP equipment used in data centers, against the OCP taxonomy
- **Identify gaps** and prioritize areas for development
- **Assess existing PCRs** against the EPA PCR Criteria and/or the ACLCA PCR criteria to evaluate quality of the PCR

MEP 2040

Committing to Zero

Landscape Assessment now **open for comments** from OCP Community

Landscape Analysis: **Preliminary Findings at a Glance**

MEP is largely EPD-ready. ICT needs category and component-level rules

ICT

Status: 27 categories identified across rack, semiconductor, server levels

- **PCR** Generic only - none category specific
- Active **PSR / c-PCR** cover 2 categories (3 more under development)

Gaps

- No Product specific rules at the component level
- Server PCRs cannot be reused directly (functional unit & energy profile differences)

Recommendations

- Develop **component-level PCRs** to enable modular assessment
- **Address methodological challenges** in new ICT-specific PCRs
- **Leverage existing PCRs** (e.g., material and component) as a foundation

MEP

Status: 21 identified categories + emerging ones

- Active **PCRs** cover 20 categories (1 under development)
- Active **PSR / c-PCR** cover 12 categories (1 under development)

Gaps

- Absence of PCR for liquid cooling systems & emerging energy tech
- Absence of PSR / c-PCR for ⅓ of product categories

Recommendations

- Prioritize PCR development for **liquid cooling infrastructure**
- Monitor PCR development for **emerging energy technologies**
- **Strengthen OCP Base Spec:** Require EPDs, phase-out spend based data
- **Catalog publicly available EPDs** (EC3, pi tool)

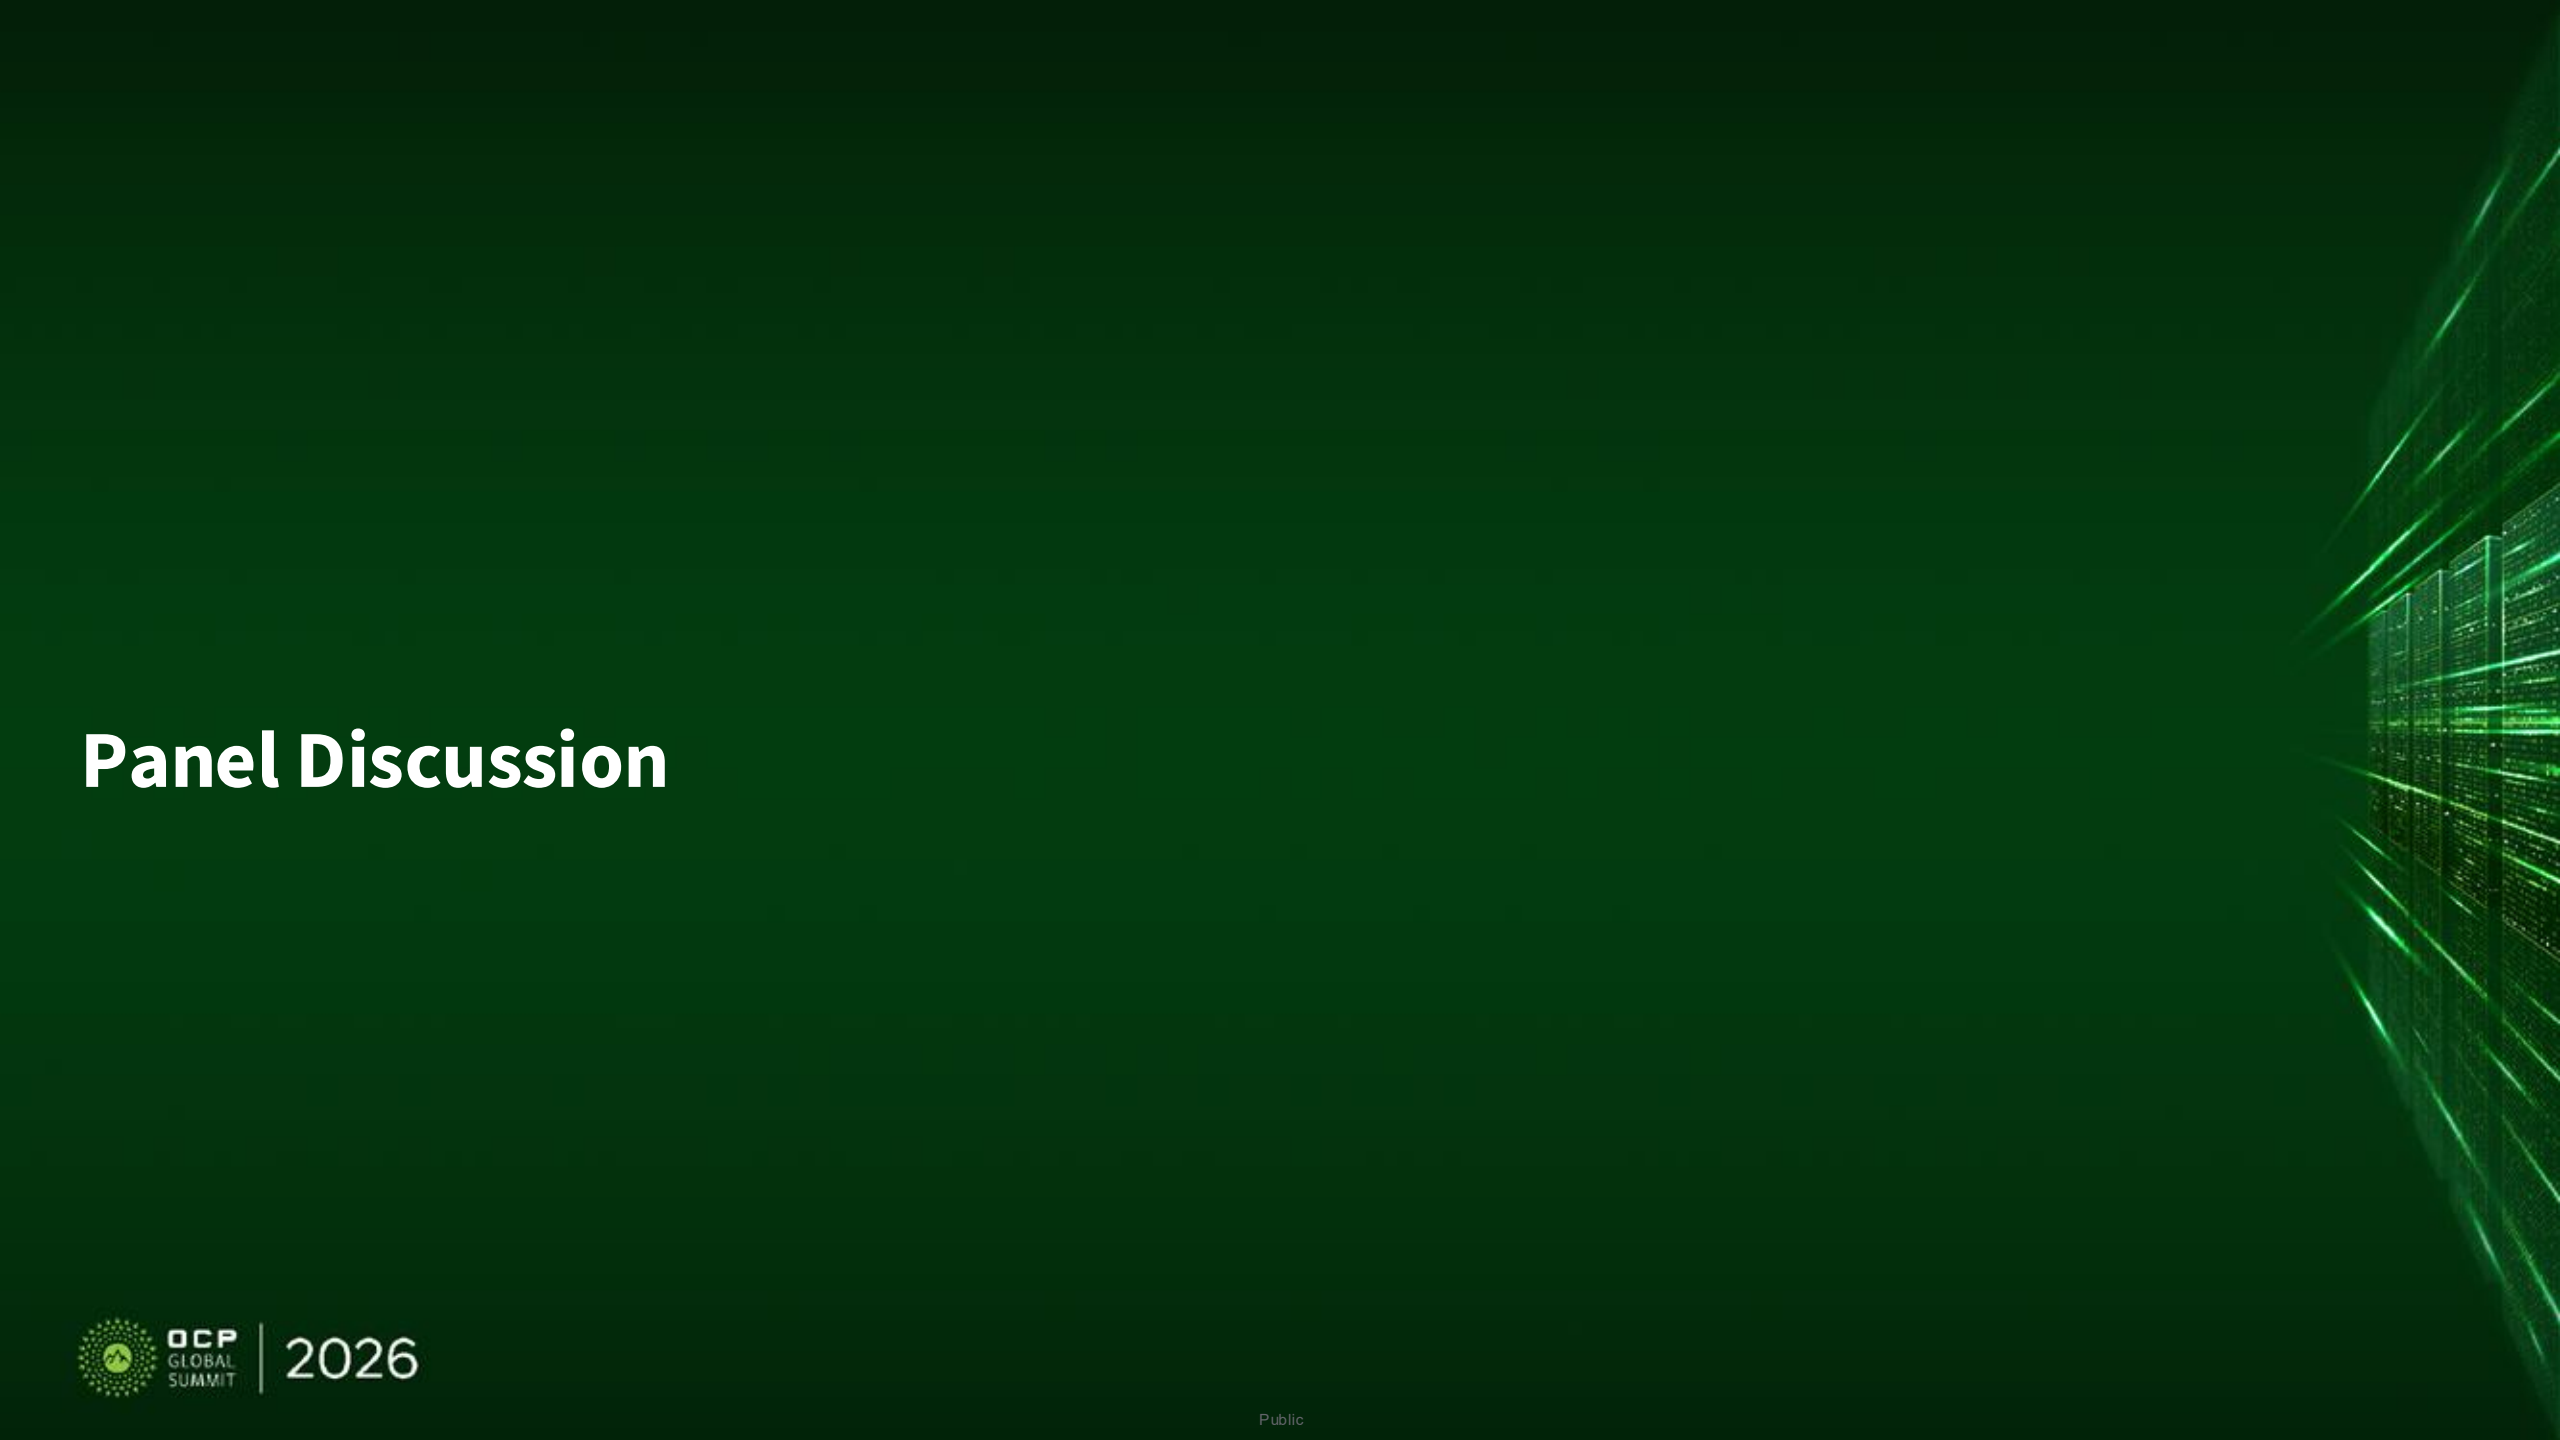

North Star: **Carbon Disclosure Workstream Vision**

To enable decarbonization across the digital infrastructure community through high-confidence, standardized environmental disclosure.

We aim to achieve this through several of levers, including:

- Design and process optimization
- Facilitating procurement decision-making
- Enabling effective supplier engagement

North Star: **Carbon Disclosure Workstream Vision**

To enable decarbonization across the digital infrastructure community through high-confidence, standardized environmental disclosure.

We aim to achieve this through several of levers, including:

- Design and process optimization
- Facilitating procurement decision-making
- Enabling effective supplier engagement

What is the call to action for this community?

Public

Call to **Action**

Contribute **technical expertise**

We encourage the OCP sustainability community to join us in:

- **Support the development of missing component-level PCRs,** specifically for liquid cooling infrastructure and server components.
- Provide comments/feedback on PCR Landscape Scan
- Join Sustainability-Embodied-Carbon@OCP-All.groups.io to work through use-cases; next meeting in November

Adopt **Base Specification**

- **Pilot the OCP Base Specification** within your own supply chain procurement processes to test data collection and offer implementation feedback.
- **Share your organization's Environmental Product Declarations** to assist in building a publicly available EPD catalog for data center equipment.
- **Earn Carbon Disclosure Ready Badge** on OCP Marketplace

Problem to solve: **Elevate credible, actionable carbon disclosure**

Thank You!
