MiTAC Computing

OPEN Compute Project SOLUTION PROVIDER®

OCP GOLD® Member

Advancing Open AI Infrastructure Management through Community and Ecosystem Collaboration

From Open Platform Firmware to Rack- and POD-Level Management

Hancock Chang - ***Director , Solution Enabling Division, MiTAC Computing***
James Shie - ***Manager, Solution Enabling Division, MiTAC Computing***

Open Source Communities + ISV Ecosystem

Building the Next Generation of AI Infrastructure Together

Open Standards | Broad Ecosystem | Real-World Value

AI Infrastructure Software Stack

Applications
AI/ML, HPC, Enterprise
- Model Training & Inference
- Generative AI
- Industry Solutions

AI Frameworks
PyTorch, TensorFlow, vLLM ...
- Frameworks & Libraries
- Optimization Tools
- AI Development Environment

AI Platform & Orchestration
Container, Kubernetes, Slurm, GPUaaS
- Kubernetes / Slurm
- Cluster & Resource Management
- GPU as a Service

Data & Storage
Parallel File System, Object Storage
- High-Performance Storage
- Scalable & Multi-Cloud
- Data Management & Access

Operating System
Linux / Windows
- Stable & Secure
- Cloud-Native Ready
- Enterprise Support

Platform Firmware
OpenBMC / Open Platform FW
- Platform Initialization, Monitoring, Mgmt.
- Open Standards
- Security & Updates

HW Platforms
Compute / Storage / Network / Power & Cooling / Rack Integration
- GPU Servers
- Storage Systems
- Network Fabric
- Power & Cooling
- Rack Integration

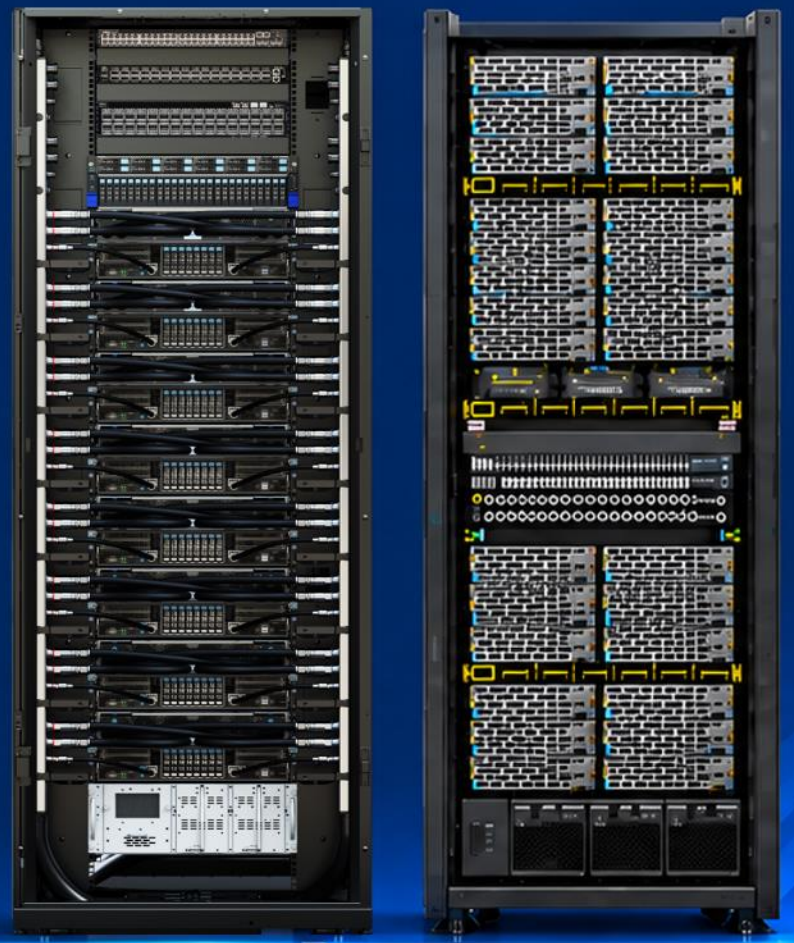

Manage Across the Full Stack

Infrastructure Management Plane

Cross-Layer Management for System / Rack / POD

- **System Management** POD / Rack Management
- Provisioning & Deployment
- Monitoring & Telemetry
- Configuration & Orchestration
- Firmware & Software Update
- Power, Cooling & Facility Mgmt.
- Event & Alert Management

From Rack to POD

Open Source Communities
Collaborate | Innovate | Grow

Open Standards
Enable Interoperability Across the Ecosystem

ISV Ecosystem
Deliver Real-World Value Together

From Rack to POD
Ready for AI at Scale

Open Together.
Smarter AI Infrastructure.

Open-Source vs Proprietary

Bright Future of Open-Source with Reliable, Secured, and Manageable Infrastructure

Open Source Firmware (OpenBMC / OPF) — Open. Collaborative. Ecosystem-Driven.	Category	Proprietary Firmware — Proven. Vendor-Centric. Controlled.
Transparency & Security Auditable, CVE scanning, SBOM, reproducible builds	Transparency & Security	**Black-box, limited visibility** Source code not publicly available, limited independent verification
Control & Customization Flexible APIs, telemetry, policies	Control & Customization	**Vendor-defined roadmap** Customization limited to vendor options
Lifecycle & Sustainability Community updates beyond EOL	Lifecycle & Sustainability	**Support ends at EOL** Dependent on vendor for continued support
Interoperability & Standards OCP-aligned, multi-vendor ready	Interoperability & Standards	**Vendor-specific, fragmented APIs** Ecosystem lock-in, limited cross-vendor support
Cost Efficiency No license fees, in-house/community dev	Cost Efficiency	**Recurring license/support fees** Ongoing vendor costs
Compliance & Audit SBOM, NIST, zero-trust friendly	Compliance & Audit	**Vendor assurance only** Limited transparency for audit and compliance
Vendor Lock-in No lock-in, interchangeable suppliers	Vendor Lock-in	**Strong lock-in to vendor SDK** Migration and interchangeability are difficult

Unlocking Open Platform Innovation with MiTAC Open-Source FW

MiTAC Confidential All third-party brands and names are the property of their respective owners.

The Open Platform FW Stacks and Challenges

Different silicon and OS ecosystems require different firmware stacks – no unified interface.

Intel Platform
(BHS-based)

- Windows
- Linux
- UEFI Payload
- LinuxBoot
- Intel FSP
- Coreboot
- MiTAC SP / DP Products with Intel BHS platform

R25206G , R25136G
(up-streamed to Coreboot)

No Unified Interface

Need separated FW stack with more resources and difficult for sustainability

OCP openSFI / UPCI Spec
Toward a more unified, open firmware ecosystem

AMD Platform
(EPYC™ 9004/9005/9006)

- Windows
- Linux
- BDS
- UEFI DXE
- LinuxBoot
- AMD AGESA (openSIL in future)
- UEFI
- Coreboot
- MiTAC Products with AMD EPYC™ 9004/9005/9006

SP5: B8261, S8050, B8056, Capri2/Capri3, G4826Z5
SP7: M2810Z6

Reduce Fragmentation
Minimize platform-specific stacks

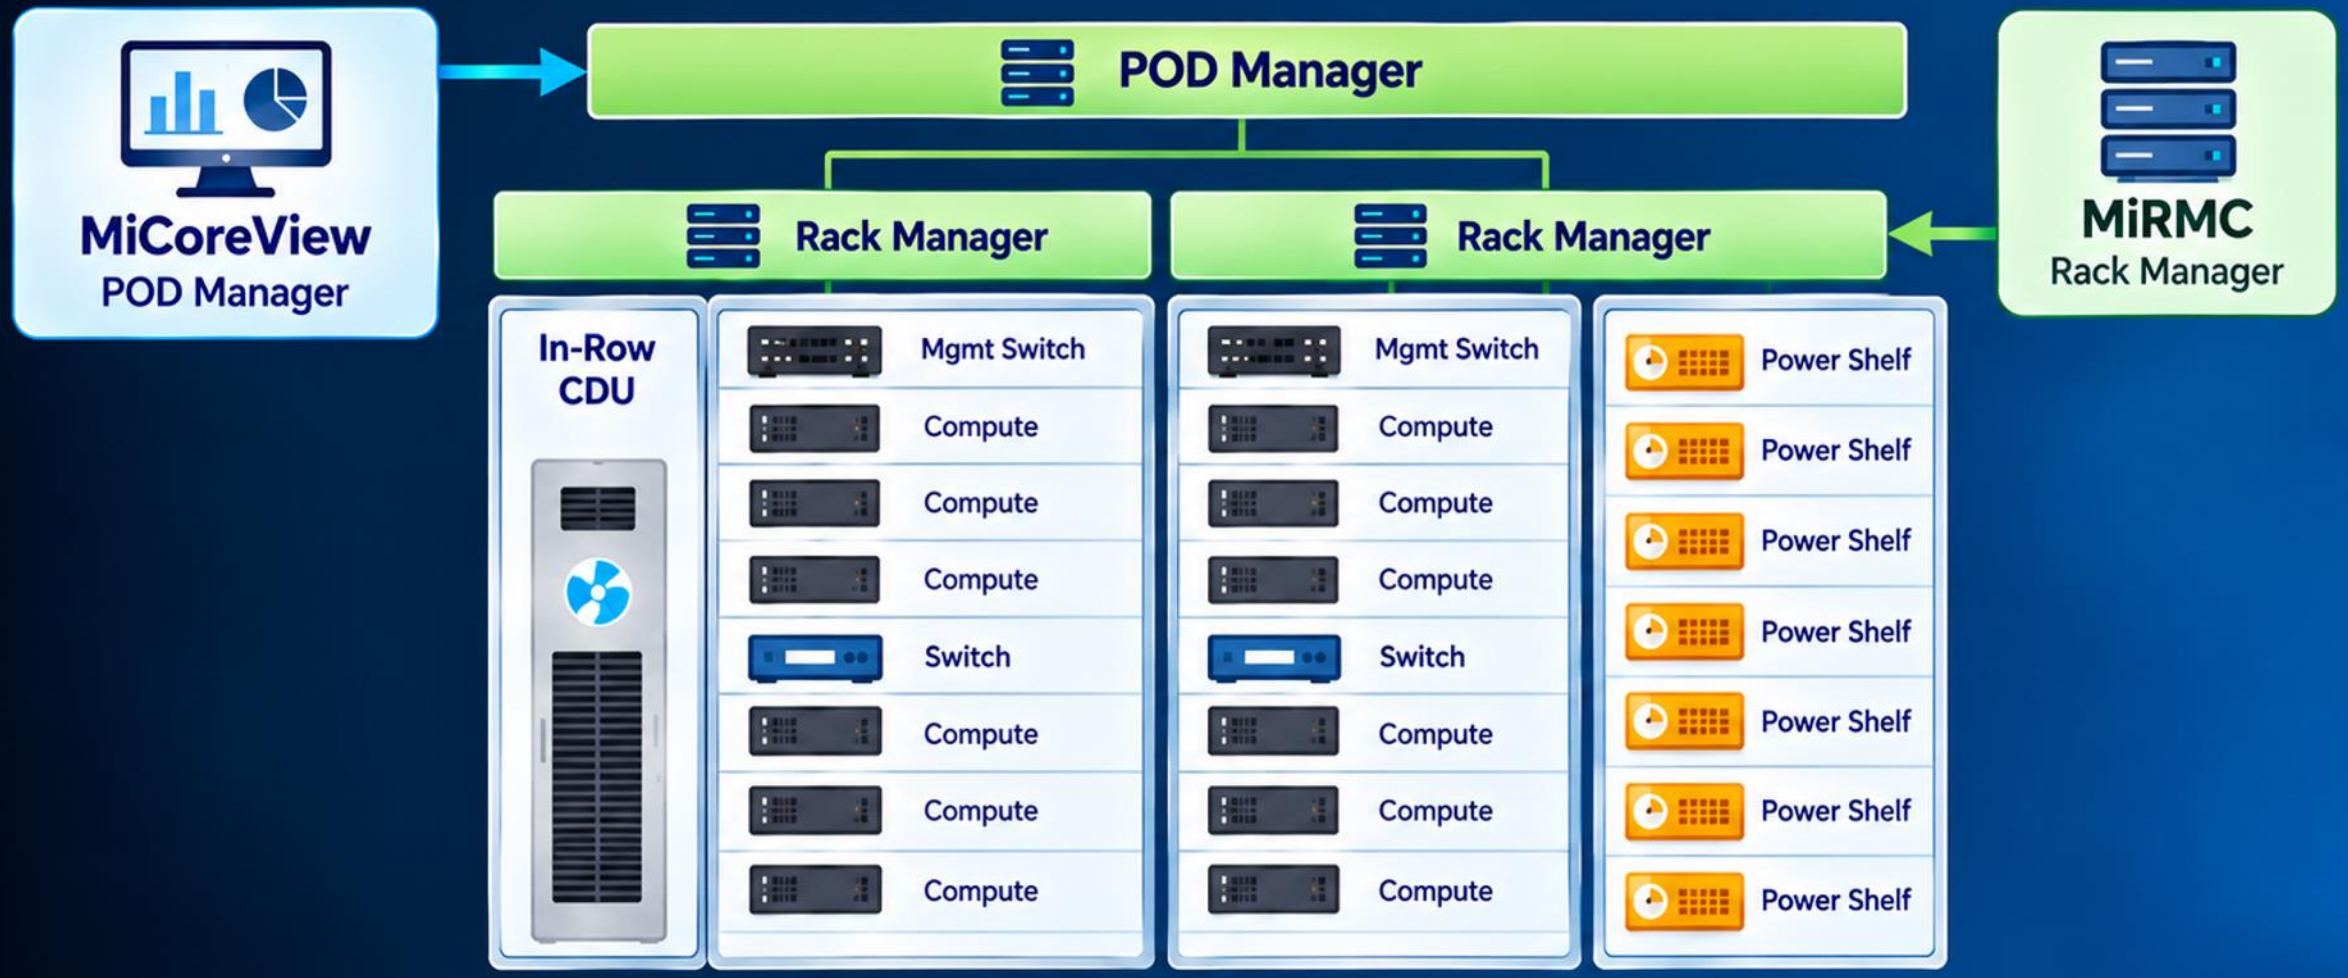

Improve Interoperability
Common interfaces and standards

Enable Long-Term Sustainability
Open collaboration and upstream contribution

The Evolution of RMC and POD Manager - Disaggregated Across Rack

OpenRMC 1.3

The Architecture Source From: OCP Global Summit 2025

MiTAC Confidential All third-party brands and names are the property of their respective owners.

MiTAC MiRMC - Extending MiOBMC from Server to Rack Mgmt.

Extend MiOBMC Firmware with Rack Management Sub-Modules to Manage the Entire Rack

Regular Server – MiOBMC (OpenBMC)
Server-Level Management

Management Interface
Redfish / Web / SSH

OpenBMC Core Services
Resource Management / Event / Update

Embedded Linux
Yocto / OpenEmbedded (OpenBMC)

BMC Hardware
AST SoC (on Server)

MiTAC G4826Z5
with Mi355

MiOBMC
On Each Server

Extend MiOBMC with Rack Management Sub-Modules

Rack Manager – MiRMC (on Rack Node)
Server-Level BMC Functions + Rack Management Sub-Modules

Management Interface
Redfish / Web / SSH / SNMP (Optional)

Server BMC Functions (MiOBMC)
- Sensor Monitoring
- FRU Info
- Event Logging
- User & Security
- FW Update

Rack Management Sub-Modules (MiRMC Extension)
- Resource Aggregation (Servers/CDU/PDU)
- Topology & Inventory
- Event Aggregation & Forwarding
- Rack Policy & Automation

Embedded Linux
Yocto / OpenEmbedded (OpenBMC + MiRMC)

BMC Hardware
AST SoC (on Rack Management Node)

MiTAC B8056 / Mgmt. Node
OpenBMC with RMC features

MiRMC
On Rack Management Node
(one server in the rack)

MiRMC for Entire Rack
- Server Nodes (MiOBMC)
- CDU
- PDU / PowerShelf
- Network Switch (optional)
- Rack Power & Cooling / Facility

MiTAC Confidential All third-party brands and names are the property of their respective owners.

The POD Manager - MiCoreView

Unified Infrastructure Management for AI-Ready Data Centers

01 Supported Device

Manage diverse infrastructure devices in a unified view.

- MCT's Server / Storage
- Power Shelf / PDU
- CDU
- Switch

Multi-vendor Support
One platform. All devices.

02 Supported Protocols

Open standards for broad interoperability.

Open & Interoperable
Standards-based integration.

03 Monitoring & Data Collection

Comprehensive telemetry for real-time insights.

- Hardware / software / FRU information
- Device → Rack → Row → Area / Group views
- Out-of-Band / In-Band gadgets
- Customized alert & event management

Real-time Visibility
From device to data center.

04 Control & Advanced Management

Simplify operations with automation and control.

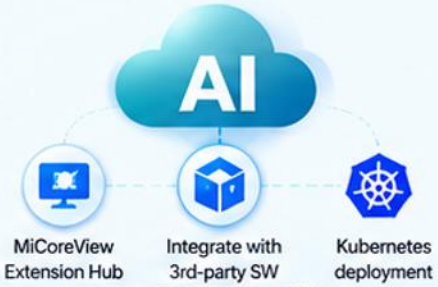

- Server power & LED control
- FW / OS provisioning
- OS backup & restore
- BIOS / BMC configuration backup
- Factory shipping SKU check & task scheduling
- Permission control & advanced device search

Secure & Efficient
Automate routine operations.

05 AI Deployment & Management

Ready for AI infrastructure and ecosystem integration.

- AI infrastructure deployment
- Ecosystem software integration
- Scalable for future AI workloads

AI-Ready Platform
Build for what's next.

Unified Management
Simpler operations

Operational Efficiency
Faster time to value

Full Visibility
Data-driven decisions

AI-Ready
Enable next-generation infrastructure

MiCoreView Extension Hub

A ***Centralized Place*** for accessing AI deployment/management tools, including solutions provided by ***Third-Party ISVs***

Open Ecosystem
Stronger Together

EXTENSION HUB

Available Extensions

Seamlessly integrate best-in-class solutions to expand MiCoreView capabilities.

Version: 2.26.0

Kubernetes

Container orchestration for automated deployment and scaling.

CATEGORY	PROVIDER
Container	CNCF

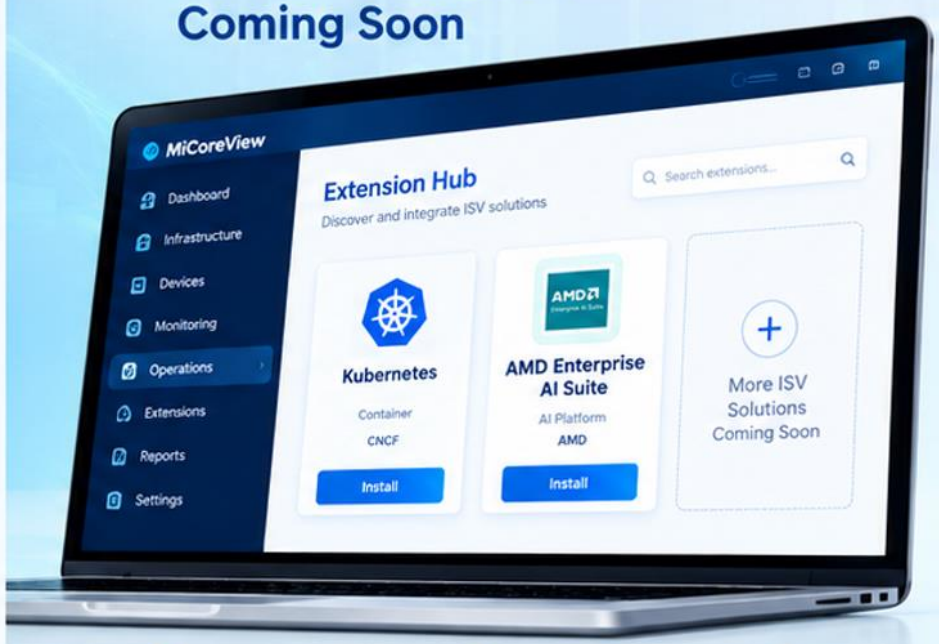

Version: 1.0.0

AMD Enterprise AI Suite

Enterprise AI suite for building, deploying, and managing production workloads.

CATEGORY	PROVIDER
AI Platform	AMD

More ISV Solutions Coming Soon

Flexible Integration | **Expand Capabilities** | **Ecosystem Collaboration**

MiTAC Confidential All third-party brands and names are the property of their respective owners.

Open Ecosystem for AMD AI Infrastructure

From Open-Source FW to Full AI SW Stacks for AMD EPYC and MI355 Platforms

Open Source Stacks
From Firmware to Infra/POD Management

MiCoreView
Infra / Rack / POD Management
- Monitoring
- Provisioning
- FW/OS Deployment
- Telemetry & Analytics
- POD Operations

MiRMC FW Coming Soon
MiOBMC | MiOPF
Firmware Layer
OpenBMC-based | Open Platform Firmware
- Platform Management
- Security & Updates
- Hardware Control
- Rack Management
- Open Standards

AMD Platform
AMD
AMD EPYC Server CPU Platform
MI355 Instinct GPU

Open | Interoperable | Scalable

MiTAC MR1100
AMD MI355 GPU Rack Solution

High-Density | Liquid-Cooled | AI-Ready

AMD GPU / HPC Software Stack
Optimized for AI and HPC Workloads

RAFAY	GPU PaaS & Orchestration Kubernetes | Multi-Cluster | GPU as a Service	Service & Orchestration
AMD Enterprise AI Suite	Enterprise AI Software Stack AI Workbench | AIMs | Resource Manager	AI Platform
AMD ROCm	GPU Compute Runtime Libraries | Tools | Optimization	Compute Runtime
ddn / ddn infinia	AI Data Intelligence Platform High-Performance | Scalable | Multi-Cloud	Data & Storage
Ubuntu	Linux OS for AI Infrastructure Stable | Secure | Cloud-Native	Operating System

Open Software | Proven Partners | Accelerated AI
